Antisense compounds of the invention are useful for treating diseases or conditions associated with FGFR-3 such as developmental disorders or hyperproliferative disorders, especially cancer of colorectal, bladder, bone, lung, cervical, breast or skin. They are useful as research reagents, therapeutics, prophylaxis, kits and diagnostics, and as tools in differential and/or combinatorial analyses to elucidate expression patterns of a portion of the genes expressed within cells and tissues. They are also useful in antisense therapy. The present sequence is an

The present invention describes a compound (I) that is 8-50 nucleobases
CC in length: (a) targets a nucleic acid molecule encoding major
histocompatibility complex (MHC) class II transactivator, and
Specifically hybridises with the nucleic acid encoding the MHC class II
CC transactivator, and inhibits the expression of MHC class II
CC transactivator; or (b) specifically hybridises with at least an 8-
CC nucleobase portion of an active site on a nucleic acid molecule encoding
CC MHC class II transactivator. (I) has immunosuppressive, antimicrobial,
CC antidiabetic, antiarheumatic, antiarthritic, cyrostatic, nootropic,
CC neuroprotective and immunostimulant activities, and can be used as an MHC
CC class II transactivator inhibitor. The MHC class II transactivator
CC class II transactivator inhibitor. The MHC class II transactivator
CC antisense oligonuclectides can be used for transactivator. e.g.
CC used for inhibiting the expression of MHC class II transactivator in
CC cells or tissues. In particular, these disease include transplant
CC rejection, diabetes, rheumatoid arthritis, cancer, Alzheimer's disease,
CC multiple sclerosis, or severe combined immunoseficiency disease. The
Sequence
                                                                antisense compounds are useful for diagnostics, prophylaxis, research reagents or kits. The present sequence represents a class II transactivator chimeric phosphorothioate antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense oligonucleotides for modulating MHC class II transactivator gene expression, particularly useful for treating autoimmune disorders such as transplant rejection, Alzheimer's disease, or multiple sclerosis,
                                          oligonucleotide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bennett
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-DEC-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           04-DEC-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUN-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cloning of deleted sequences (CODE) genomic subtraction method based on the use of (I). (M) is useful for preparing nucleic acid and/or modified nucleic acid reference material bound to a solid phase. (III) is useful for discriminating between different genomes, detecting methylations, deletions, mutations and other changes within genomic material, obtained from the same individual at different points of time, or in the genomic material obtained from one individual as compared to a standard representation obtained from at least one other individual, or their combination. The present sequence represents a PCR primer which is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and/or modified nucleic acid (NA/MNA) reference material bound to a solid phase. (M) comprises digesting NA/MNA reference material using biochemical and/or chemical approaches, to obtain sequence fragments surrounding a specific recognition site, and selecting the NA/MNA sequence fragments associated with a specific recognition site. Also described: (1) fragments (1) obtained by (M); (2) nucleic acid and/or modified nucleic acid microarray (1) ontaining (1); (3) representation (III) of the genome or a part of the genome of an organism, comprising multiple copies of (1), or its selection, obtained by (M); and (4) NotI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-APR-2001; 2001US-0284925P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-APR-2002; 2002WO-SE000788
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO200286163-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome 3p21.2-21.32; PCR primer;

progenitor cell with a pancreatic development gene and/or culturing the liver stem/progenitor cell with a pancreatic development gene and/or culturing the liver stem/progenitor cell in a medium comprising factors that induce differentiation into the pancreatic functional cell, where the transfected cell is converted to the pancreatic functional cell. The method is useful in converted to the pancreatic functional cell. The pancreatic functional cells that may be used for treating diabetes. Sequences ACC47827-862 represent PCR primers used in a Southern blotting experiment for characterisation of expression of various genes in liver stem/progenitor cells. The genes studied were paxi, Hlxb9, Isll, ngn3, Nlkx2, Pax6, NeuroD/beta2, Nkx6.1, Pax4, insulin I, insulin II, glucagon, somatostatin, PP, amylase, elastase, GLUT-2, glucokinase, PC1, PC2, PC3 and carboxypeptidase E (CPE)
                                                                                                                                                                                                                                                                                                                                                                                                     Converting liver stem/progenitor cells to a pancreatic functional cell, useful for treating diabetes, comprises transfecting liver cells with pancreatic development gene and/or culturing with pancreatic differentiation factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CPE; PCR; primer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleotides in length targeted to a nucleic acid molecule encoding human calreticulin, and specifically hybridises with and inhibits the expression of human calreticulin. A compound of the invention has cytostatic, cardiant, virucide, osteopathic, and antiparasitic activity, and may act as a calreticulin-inhibitor, and have a use in antisense gene therapy. The antisense compound is useful for treating a disease or condition associated with calreticulin e.g. melanoma, viral warts, rubella, schistosomiasis, congenital heart block or osteoporosis. Further, it is useful as prophylaxis, research reagent and diagnostic. The present sequence is used in the exemplification of the invention. The sequence is a phosphorothioate oligonucleotide, having 2'-MOE wings and a sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense compound that specifically expression of human calreticulin, useful osteoporosis or schistosomiasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                virucide; osteopathic; antiparasitic; antisense gene therapy; melanoma; viral warts; rubella; schistosomiasis; congenital heart block; osteoporosis.

Sequences ADG90460-ADG90539 represent phosphorothioate targeted to the CC human talin gene, which inhibit its expression. The antisense were designed to target different regions of human talin RNA, and were CC analysed for their effect on talin expression by quantitative real-time PCR. Talin is a cytoplasmic protein which links cytoskeletal proteins CC such as actin, myosin and vinculin to integrins, thereby linking the CC extracellular matrix to other cells. It is thought to be involved in the CC regulation of cellular adhesion and cell morphology. Talin is highly CC expressed in platelets, and may play a role in platelet adhesion as its CC subcellular distribution differs between resting non-adhesive platelets CC and activated adhesive platelets. It could also play a major role in CC participate in the transmission of contractile force to the extracellular CC matrix in cardiomyocytes, and exhibits mechanical loading-dependent CC expression at myotendinous junctions. The expression of talin is CC downregulated by androgens in prostate tissues, a phenomenon known to CC the invention are useful for diagnosis, prevention and treatment of talin crelated disorders, such as those related to cellular adhesion. The CC present sequence represents a human c-Ha-ras phosphorothioate antisense coligonucleotide used as a positive control in determining optimal CC of the invention concentration for a particular cell line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense oligonucleotides targeted to nucleic acid molecules encoding human Talin, useful for inhibiting the expression of human for treating a human having a disease or condition associated

/note= "This oligonucleotide has a phosphorothioate
backbone and 2-'methyoxyethyl (2'-MOE) wings at the 5
and 3' ends, which are 5 nucleotides in length. Also
cytosine nucleotides are 5-methylcytosines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; 6 C; 7 G; 1 T; 0 U;

                    The invention relates to an antisense compound targeted to a nucleic acid molecule encoding human checkpoint kinase 2 (CHK2). The antisense compound specifically hybridises with and inhibits the expression of human CHK2. The antisense compounds are useful as research reagents and diagnostics, in distinguishing between functions of various members of a biological pathway, and in the treatment of a disease or disorder, which can be treated by modulating the expression of CHK2. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hyperproliferative disorder (cancer), or bone metabolism or cholesterol disorder. (I) is useful for diagnostics, therapeutics, prophylaxis and research reagent and kits. (I) is useful prophylactically prevent or delay infection, inflammation or tumour formation. The present sequence represent a mouse caspase 7 inhibiting chimeric phosphorothicate oligonucleotide having 2', MOE wings and a deoxy gap, which is used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 targeted to a nucleic acid molecule encoding caspase 7, which specifically hybridises with and inhibits the expression of caspase (I) has antiinflammatory and cytostatic activities, and can be used antisense therapy and as an inhibitor of caspase 7 expression. (I) is useful for inhibiting the expression of caspase 7 in human cells or tissues, and for treating a human having a disease or condition associated with caspase 7 including inflammatory condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sarthy A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                តិស្តិត្តស្តិត្តិនិង្គ
The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a cassette having an compressible selectable marker and modifying other allele by creombination, of a promoter replacement fragment with a heterologous promoter, so that expression of the second allele is regulated by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal cells having both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulates the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The method is useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of a PCR primer used in the method of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based that the printed specification but is based to the present that the printed specification but is based that the printed specification by C. albicans the printed specification and the printed specification a
                                                                                    Novel antisense compounds targeted for modulating gene expression and expression of caspase 7 in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Caspase 7; antisense modulation; antiinflammatory; cytostatic; antisense therapy; caspase 7 inhibitor; inflammatory condition; hyperproliferative disorder; cancer; bone metabolism; infection; cholesterol disorder; inflammation; tumour; phosphorothioate; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense compounds, compositions and methods for modulating the expression of calreticulin. The compositions comprise antisense compounds, particularly antisense oligonucleotides, targetted to nucleic acids encoding calreticulin. The antisense compound is useful for inhibiting the expression of calreticulin in human cells or tissues. It is also useful for treating a human having a disease or condition it is also useful for treating a human having a disease or condition cancer, autoimmune disease, viral infection or cardiovascular disease, by inhibiting expression of calreticulin. It is useful for diagnostics, therapeutics, prophylaxis and as research reagents and kits. It is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           used in antisense therapy. The present sequence is an antisense compound targetted to human calreticulin. This sequence is used to study the antisense inhibition of calreticulin expression-phosphorothioate 2'-MOE
                                                                                                                                                                                                   Nucleic acid accessible hybridisation site; detection; hybridisation; characterisation; identification; nucleic acid structure; diagnosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     secondary structure. The method comprises amplifying a target nucleic acid having at least one accessible and one inaccessible site. Primers that form an extension product are identified as the oligonucleotides which can interact with the folded target nucleic acid. Oligonucleotides from the present invention can be used in novel detection methods for clinical diagnostic purposes, including the detection and identification of pathogenic organisms (e.g. HTV). The method allows the ability to rapidly analyse nucleic acid structures. ABL46034 to ABL46367 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying oligonucleotides hybridizing to nucleic acids containing secondary structure, useful in clinical diagnosis, comprises identifying primers that interact with the target to form an extension product under

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 2077
ABS74336/c
           The invention relates to a purified nucleic acid sequence (referred as CCANAZDZ gene which encodes human calcium channel alpha2delta-2 subunit protein) comprising a fully defined alpha2delta splice isoform 1, 2 or 3 nucleic acid sequence, or its complement and the encoded proteins. Also include are: (1) a method of producing a calcium channel protein which involves introducing a recombinant expression vector comprising the CANAZDZ nucleic acids and encoding the calcium channel protein, into a cultured host cell under conditions such that the host cell expresses the amino acid sequences; and (2) a method for co-expressing calcium channel proteins, comprising carrying out the method of (1), but with one or more than one expression vector comprising one or more nucleic acid sequences encoding the splice variants. CACNAZDZ nucleic acid is useful for proteins. The recombinantly expressed conjupeptide is useful for treating patients with Lambert-Baton myasthenic syndrome (LEMS) (an autoimmune disease) and for identifying compounds useful for treating other diseases associated with abnormal calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Local Similarity

```

New antisense preventing or

compound useful for delaying infection,

for inhibiting expression of Talin and ion, inflammation or tumor formation.

for

Example 15;

Col 41; 46pp; English.

present invention describes an antisense compound (I), 16 to

WPI; 2002-470102/50.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC in length targeted to specific base regions of a nucleic acid encoding CC human Talin. Also described: (a) an antisense compound up to 30 bases in CC length which inhibits the expression of human Talin; (b) a composition CC (II) comprising (I) or (a); and (c) inhibiting the expression of human Talin; human cells or tissues comprising contacting the cells or CC tissues in vitro with (I) or (a). (I) has antimicrobial, antiinflammatory CC and cytostatic activities, and can be used in antisense gene therapy and CC expression of human Talin in human cells or tissues; to prevent or delay infection, inflammation or tunour formation; and in diagnostics, CC therapeutics, prophylaxis, and in research reagents and kits. The present CC sequence represents a human Talin antisense chimeric phosphorothicate CC oligonucleotide, having 2'-methoxyethyl (2'-MOE) wings of 5 nucleotides at the 5' and 3' ends and a 10 nucleotide decay gap in the middle, which CC is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                        This invention relates to DNA encoding a guanosine triphosphate binding protein coupled receptor (GPCR) protein (BG37). The GPCR BG37 protein is antirheumatic, antiarthritic, antiulcer, antiinflammatory, antiasthmatic, antiallergic, immunosuppressive and cardiant in its action. The protein is used in the prevention, treatment and diagnosis of diseases associated with GPCR signal transduction, such as rheumatoid arthritis, stomach ulcer, inflammatory bowel disease, ischeamic heart disease, cardiac arrhythmia, hypertension, hypotension, obesity, asthma, allergies, pain and autoimmune diseases. The present sequence represents a primer related

The present invention relates to a new antisense compound 8-30 nucleobases in length targeted to the start codon, coding region, stop codon or 3'-untranslated region of a nucleic acid molecule encoding huma checkpoint kinase 2 (CHK2). The antisense compound specifically hybridises with and inhibits the expression of human CHK2. The antisense compounds are useful for modulating the expression of CHK2 and for treating diseases or conditions associated with expression of CHK2. The antisense compounds are also useful as research reagents and diagnostics and in distinguishing between functions of various members of a biological pathway. The present nucleic acid sequence represents a chimeric phosphorothicate oligonucleotide that was used in the methods chimeric phosphorothicate oligonucleotide that was used in the methods chimeric phosphorothicate of included that was used in the methods of the control of the con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for modulating the expression of BCASI (breast cancer amplified sequence 1, also known as AIBCl for amplified in breast cancer 1 and NABCl for novel amplified in breast cancer 1). The antisense compounds of the invention are useful for treating an animal having a disease or condition associated with BCASI, such as hyperproliferative disorders including breast or prostate cancer. These compounds are also used as research reagents and diagnostics; to distinguish between functions of various members of a biological pathway; in the treatment of a disease or disorder which can be treated by modulating the expression of BCASI; as prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation; and as probes or primers. These antisense compounds are used in antisense therapy. The present sequence is an antisense coligonucleotide targetted to human BCASI DNA. This sequence is used in the exemplification of the invention
                          encoding RAI
                                                                                                                                                                                                                                                                                                                                                                    Antisense gene therapy; RAIDD; death domain; caspase recruitment domain; CARD; hyperproliferative disorder; cancer; growth disorder; mouse; metabolic disorder; infection; inflammation; tumour formation; RIP associated ICH-1/CED-3-homologous protein with death domain;
                          Novel antisense compound that hybridizes and inhibits nucleic acid encoding RAIDD which is an adaptor molecule containing both death and caspase recruitment domains, for treating hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense compounds targeted to a nucleic acid molecule encoding BCAS1, useful for treating diseases or conditions associated with BCAS1, such as hyperproliferative disease, particularly breast or prostate
                                                                                                                                                                                          01-NOV-2000; 2000US-00705267

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a compound (I) 8-50 nucleobases in length targeted to a nucleic acid molecule (II) encoding RAIDD which is an cadaptor molecule containing both death domain (DD) and caspase recruitment domains (CRAD), where (I) specifically hybridises with at least an control profit of the expression of RAIDD, or specifically hybridises with at least an control profit of thibiting the expression of RAIDD, Receptor interacting protein (RIP) associated ICH-1/CED-3-homologous protein with death domain) in cells or tissues, and for treating an animal having a disease or condition associated with RAIDD, where the disease or condition is a hyperproliferative disorder such as cancer, or a growth or metabolic disorder. (I) is also useful for disgnostics, therapeutics, prophylaxis, cancer of a biological pathway, and in antisense gene therapy. (I) is also useful prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. This sequence represents a mouse RAIDD profession.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                           The present invention describes a compound (I) 8-50 nucleobases in length targeted to a nucleic acid molecule (II) encoding a natural dominant negative regulator of caspase 8, FILP-c, where (I) specifically hybridises with and inhibits expression of the protein, or specifically hybridises with at least an 8-nucleobase portion of an active site on (II) (I) has antiinflammatory and anti-tumour activities. (I) is an inhibitor of FILP-c expression, a modulator of apoptosis and can be used in antisense gene therapy. (I) is useful for inhibiting the expression of FILP-c in cells or tissues, and for treating an animal having a disease or condition associated with FILP-c. (I) is also useful for modulating apoptosis in a cell, where a caspase such as caspase 8, caspase 3 or in the caspase of the caspase such as caspase 8, caspase 3 or in the caspase of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                encoding a natural natural for preventing

(1) is also useful prophylactically, e.g., to prevent or delay infection, inflammation or tumour formation. The present sequence represents human FLIP-c inhibiting chimeric phosphorothicate oligonucleotide having 2'-methoxyethyl (2'-MOE) wings, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; BCAS1; breast cancer an amplified in breast cancer 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses novel human diacylglycerol kinase (DGK) isoforms namely diacylglycerol kinase epsilon, diacylglycerol kinase zeta, diacylglycerol kinase zeta-2 and their corresponding cDNAs. Human diacylglycerol kinase DNA is useful for coding human diacylglycerol kinase bax is useful for coding human diacylglycerol kinase, which is useful for catalysing the conversion of diacylglycerol kinase, which is useful for catalysing the conversion of diacylglycerol to phosphatidic acid. In particular, the human diacylglycerol kinase and its DNA are useful for decreasing intracellular levels of diacylglycerol (DAG) and for increasing intracellular levels of phosphatidic acid in cells. The present DNA sequence is the exon/intron junction sequence of human diacylglycerol kinase (DGK) zeta gene
                                                                                                                         New DNAs of the human diacylglycerol kinase, useful for modulating the levels of diacylglycerol kinase in cells to catalyze the conversion of diacylglycerol to phosphatidic acid, therefore increasing phosphatidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Key

                      useful for diagnosing or determining susceptible to corneodesmosin-
mediated disease, which facilitates subsequent treatment of the disease
for e.g. inflammatory diseases, in particular psoriasis. Fragments of (I)
are useful in diagnostic, prognostic or therapeutic methods and as
research tools for e.g. in drug screening. (II) is useful as probes or
primers for detecting an allele of the polymorphism or in the regulation
of corneodesmosin gene. Antibodies which binds to (I) are useful for
screening DNA clone libraries for cells secreting the antigen. (II) is
                                                                                                                                                                                                                                                                         The invention relates to corneodesmosin protein (I) and nucleic acid (II) encoding the corneodesmosin gene, where the gene comprises a base substitution, deletion or insertion at one or more positions. (I) and (II) are useful for screening for agents for use in prognosis, diagnosis and treatment of individuals having or being susceptible to corneodesmosin-mediated disease, by monitoring the reaction between the molecules and the agents. The nucleotide and amino acid polymorphisms are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Corneodesmosin protein and polynucleotide encoding it, having one or more polymorphisms useful in treating, diagnosing or determining susceptibility to corneodesmosin-mediated diseases, for e.g. inflammatory \hat{\mathbf{g}}_{i}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           its DNA are useful for decreasing intracellular levels of diacyl-
glycerol (DAG) and for increasing intracellular levels of phosphatidic
acid in cells. The present DNA sequence is the exon/intron junction
sequence of human diacylglycerol kinase (DGK) zeta gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diacylglycerol kinase zeta-2 and their corresponding cDNAs. Human diacylglycerol kinase DNA is useful for coding human diacylglycerol kinase, which is useful for catalysing the conversion of diacylglycerol kinase, which is useful for catalysing the conversion of diacylglycerol kinase and the buman diacylglycerol kinase and buman diacylglycerol kinase a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; single nucleotide polymorphism; SNP; PCR primer; antiinflammatory; antipsoriatic; corneodesmosin; inflammatory disease; psoriasis; ss.

Isolated epidermal stem cells are useful for preparing a tissue in vitro which involves contacting the cells with a substrate (comprising fibroblasts, i.e. a connective tissue) so as to yield a tissue. Transformed epidermal stem cells are also useful for expressing an open reading frame in a mammal which involves contacting a mammal with the cells and detecting or determining whether the mammal expresses the open reading frame. Isolated cells and transformed cells are also useful for: (1) preparing a chimeric non-human mammal involving introduction of stem cells into a non-mammalian blastocyst forming a chimeric blastocyst which is then introduced into a female non-human mammal capable of gestating a chimeric blastocyst to torm of the colls into a female non-human mammal capable of gestating a chimeric blastocyst which is then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cells which can be expanded in large numbers, have high proliferative capacity, tissue regeneration and long term expression of a transduced reporter gene. The cells are preferred sources for bloengineering tissue and/or gene therapy as these cells have low immunogenicity. This sequence represents PCR primer #3 required for the detection of Enhanced green fluorescent protein (EGFP) in GFP marked epidermal stem cells described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     blastocyst to term so as to yield a progeny chimeric mammal; and (2) bioengineering a tissue and for gene therapy or cell therapy, e.g. epidermal stem cells transduced with vascular endothelial growth factor (VEGF) may be introduced into diabetic mammals to inhibit or treat ischaemia. The methods provide a substantially pure preparation of stem cells which can be considered in the substantially pure preparation of stem cells which can be considered in the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a new method of preparing isolated mammalian epidermal stem cells from e.g. human, murine or primate sources by separating from a sample with a population of mammalian epidermal cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAF75040 standard; DNA; 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to 5-hydroxy tryptamine receptor 1A (HTR1A) gene. HTR1A-encoding polymucleotides containing one or more of the novel polymorphic sites are useful in studying the expression and biological function of HTR1A, as well as in developing drugs targeting this protein. In addition, information on the combinations of polymorphisms in the HTR1A gene may have diagnostic and forensic applications. A polymorphic variant of HTR1A is useful in studying the effect of the variation on the biological activity of HTR1A as well as studying the binding affinity of candidate drugs targeting HTR1A for the treatment of neuropsychiatric diseases and Tourette's syndrome
                                                                                                                                                                                                                                                                                                                                                                                    Human; catalyst; diacylglycerol;

New DNAs of the human diacylglycerol kinase, useful for modulating the levels of diacylglycerol kinase in cells to catalyze the conversion of diacylglycerol to phosphatidic acid, therefore increasing phosphatidic acid levels.

WPI; 2001-327248/34.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pituitary adenylate cyclase-activating polypeptide (PACAP) receptor (PACAP) gene. The present sequence is a PCR primer for human PACAP type 1 receptor (PAC IR). PACAP is a neuropeptide which is widely expressed in the brain, and in various peripheral organs. PAC IR is selective for PACAP and is expressed at high levels in the brain. PAC IR is useful for preparing a medicament in the treatment and/or modulation of disturbances in stroke and other cerebrovescular diseases, cardiovascular diseases, leishmaniasis, immunosuppressive disorders, nociception (reaction to pain sensation) and learning and memory functions
                                                                                          WO200134653-A2
                                                                                                                                               Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KIIF-1 protein. KIIF-1 is present on the surface of lymphoid progenitor cells and natural killer (NK) cells with an apparent molecular weight of 36-38 kilo Daltons (kD). KIIF-1 is a specific marker for NK cells and lymphoid progenitors. It is used to raise specific antibodies (and fragments of its extracellular domain are used for detecting NK cells. The antibodies are used to remove KLIF-1+ cells from hematopoietic tissue intended for transplantation; to detect, quantify or isolate NK and lymphoid progenitor cells; and to treat autoimmune diseases. Detection of KLIF-1 nucleic acids is used to diagnose malignant and benign hemopathy. Treatment of hematopoietic cells to remove KLIF-1 positive cells reduces the risk of causing graft versus host disease after transplantation

                                                                                                        Bronchitis (CB), Bronchiectasis (BE), asthma and Cystic Fibrosis (CF). In addition, patients suffering from mucociliary dysfunction are susceptible to secondary becterial infections. A partial coding sequence for human placental bikunin, AAR35464, has been isolated (see AAA70385). Placental bikunin is a Kunitz-type serine protease inhibitor protein, which can stimulate the rate of mucociliary clearance of mucus and sputum in lung airways. Therefore, placental bikunin protein may be used for treating lung diseases such as CF, CB, BE, and chronic sinusitis and glue ear which are caused by retention and accumulation of mucus. The present sequence is a PCR primer used to clone the extracellular region coding sequence of human placental bikunin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the presence of Candida in a sample, to detect and disrupt genes, as assign functions to nucleotide sequences. Sequences AAA57968-A57981 represent motifs within the C. albicans genome into which a TCa2 retrotransposon was able to insert
                                                                                                                                                                                                                                                                                                                                                                      mucus and sputum in lung airways. Mucociliary dysfunction is a serious complication of chronic obstructive lung diseases such as Chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Stimulating mucociliary clearance rate of mucus and sputum in lung airways for treating lung diseases such as cystic fibrosis and bronchitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mucociliary dysfunction; mucus; sputum; human; PCR primer; chronic obstructive lung disease; chronic bronchitis; CB; Bronchiectasis; BE; asthma; cystic fibrosis; CF; bacterial infection; placental bikunin; Kunitz-type serine protease inhibitor; chronic sinusitis; glue ear; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human placental bikunin extracellular region cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAA70380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 20

                                                                                                                                                                       The present invention relates to a method for detecting polymorphisms in a nucleic acid sequence. The method comprises amplifying nucleic acid sequences with a first primer homologous to a miniature inverted-repeat transposable element (MITE) in combination with another primer (non)homologous to MITE, separating the amplified nucleic acid fragments,
                                                                                                Sequence
                                                                                                                                   and analysing the fragments obtained in relation to reference fragments obtained from the amplification of the nucleic acid with the primer homologous to MITE. The present sequence is a primer used in the method
                                                                                                                                                                                                                                                      Claim 6; Page 19; 62pp; English.
                                                                                                                                                                                                                                                                            Detecting polymorphisms of nucleic acid, useful for e.g. tracing pro by amplifying the nucleic acid with a homologous and a nonhomologous primer to a miniature inverted-repeat transposable element.

                                                                                     The present sequence is one of a large number of antisense oligonucleotides which are targeted to nucleic acids encoding fra-1. The sequences may be oligodeoxyribonucleotides or chimeric oligonucleotides containing a central gap region consisting of ten 2'-deoxynucleotides, which is flanked on both sides by 2'-methoxyethyl (2'-MOE) wings. The oligonucleotides have a phosphorothicate backbone and the cytidine residues in the 2'-MOE wings are 5-methylcytidines. The fra-1 antisense oligonucleotides are useful for inhibiting the expression of fra-1 in human cells or tissues. They can be used for diagnostics, therapeutics, prophylaxis and as research reagents and in kits. Use of the antisense compounds may also be useful prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

CC abbicans which have a copy number of 40-150, preferably 50-100 copies per CC genome. In particular, the invention relates to the novel C. albicans CC Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TGa2, and to the novel C. albicans CC hOG1042 and has a copy number of 50-100 copies per cell. It comprises CC identical 280 bp long terminal repeats (LTRS) and two open reading frames CC (ORFS). The first ORF encodes a gag (group antigen) protein, and the corondors encodes a polyprotein (pol) consisting of an aspartate CC (ORFS). The first ORF encodes a gag (group antigen) protein, and the corondors encodes a polyprotein (pol) consisting of an aspartate CC protease, integrase, reverse transcriptase (RT) and RNaseH. The gag and CC protease, integrase, in the same reading frame, separated only by a coronation codon (TGA). Translation of the pol ORF occurs through the CC crasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The crassformation and expression. They can thus be used for in vitro or in vivo transformation and expression. They can thus be used for the collecule (e.g., an antigen) and may also be used for eliciting an communological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the cuse of retroviral vectors is unsafe or undesirable. Additionally, the ctroviransposons may be used to generate transgenic animals, to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of Chlamydia pneumoniae (see AAX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAX91584- AAX95879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising
                                                                                                                                                                                                                                                                                                                                                                                                      Human fetal brain cDNA clone vc4_1 DNA probe.

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the hove a variety of uses:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel human secreted proteins which are encoded CC by polynucleotides obtained from fetal brain, adult skin, adult brain, CC adult heart, adult thymus and adult aorta cDNA libraries. The CC polynucleotides and proteins are predicted to have biological activities CC which would make them suitable for treating, preventing or ameliorating cmedical conditions in humans and animals, although no supporting data is CC given. Suggested activities include nutritional activity, cytokine and CC cell proliferation/differentiation activity, immune stimulating (e.g. as CC vaccines) or suppressing activity, hematopoiesis regulating activity, ctissue growth activity, activity, himbin activity, cell chambolytic activity, ceeptor/ligand activity, anti-inflammatory activity, cadherin/tumor CC receptor/ligand activity, anti-inflammatory activity. The polynucleotides are also stated to be useful for gene therapy. AAZ43809-CC 743840 represent DNA probes used to isolate the polynucleotides CC represented in AAX3777-7243808 which encode the secreted proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                    AAV73084-V73145 are oligomers used in a method to detect a single-base mutation in a human ras oncogene. These probes comprise 12-43 nucleotides of formula 5'-B-Q-D-3', Q = 3 nucleotides complementary to the mutated codon, and B and D each = 0-20 nucleotides complementary to the ras sequences flanking the mutated codon. The probes are useful for detecting cancers associated with point mutations
               Human ras oncogene probe #6

AAV73026-V73071 are probes used to detect a single-base mutation in a human ras oncogene. These probes comprise 12-43 nucleotides of formula 5' B-Q-D-3', Q=3 nucleotides complementary to the mutated codon, and B and D each = 0-20 nucleotides complementary to the ras sequences flanking and D each = 0-20 nucleotides complementary to the ras sequences flanking the mutated codon. The probes are useful for detecting cancers associated with motion of the probes are useful for detecting cancers associated with motion of the probes are useful for detecting cancers associated with motion of the probes are useful for detecting cancers associated with motion of the probes are useful for detecting cancers associated with motion of the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers associated with the probes are useful for detecting cancers as a second cancer and the probes are useful for detecting cancers as a second cancer and the probes are useful for detecting cancers as a second cancer and the probes are useful for detecting cancers as a second cancer and the probes are useful for detecting cancers as a second cancer as a second cancer and the probes are useful for detecting cancer as a second cancer as a second cancer and the probes are useful for detecting cancer as a second cancer as a second cancer and the probes are useful for detecting cancer as a second ca

structure formation in nucleic acid targets; for analysing folded nucleic acids targets; and for analysis of nucleic acid structures. The methods can be used for the detection and characterisation of nucleic acid sequences to detect the presence of pathogenic nucleic acid sequences indicative of an infection, the presence of variants or alleles of mammalian genes associated with disease and cancers, and the identification of the source of nucleic acids found in forensic samples, analysis of both strands (e.g. the sense and antisense strands) and are ideal for high-level multiplexing. The products produced are amenable to qualitative, quantitative and positional analysis. The methods may be performed in solution or in the solid phase (e.g. on a solid support). The methods are powerful in that they allow for analysis of longer fragments of nucleic acid than current methodologies. Sequences AAV70430-11 represent princes used for the PCR amplification of M. tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                           characterisation of nucleic acid sequences and sequence changes. One method of detection and characterisation comprises: (a) providing: (i) a folded target having a DNA sequence comprising at least 1 double stranded region and at least 1 single stranded region; and (ii) at least 1 probe complementary to at least a portion of the folded target; and (b) mixing the target and probes so that the probe hybridises to form a probe folded target; and the probe hybridises to form a probe folded target complex. Also provided are methods for determination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detection and characterisation of nucleic acid sequences - by mixing folded target and one or more probes to form a probe/folded target complex and detecting and characterising the complexes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            M. tuberculosis katG gene primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid detection; nucleic acid characterisation; infection; disease; cancer; forensic; paternity; multip

                                                CC to growth factor plasma membrane receptors (including insulin receptors)

CC and signaling motifs in signaling proteins and modulates the activity of

Ct those molecules through tyrosine kinase activity. It is also associated

CC with vesicle trafficking and protein sorting and therefore acts as a

CC mediator of insulin action on glucose transport and metabolism. The

CC specification describes a mutated P85-alpha nucleic acid sequence which

CC comprises the mutations, relative to the present sequence: C261T, T663G,

CC A810G, and/or G1020A. The nucleic acids may be used to detect mutated

CC genes encoding the P85 alpha subunit of P13K and to identify mutations

CC which may alter the activity of the polypeptide and result in a disease

CC state. P13K is associated with pinocytic activity, cytoskeletal

CC rearrangements that accompany secretory processes, membrane ruffling,

CC and in membrane and vesicle trafficking. Therefore, P13K acts as a

CC mediator of insulin action on glucose transport and metabolism. Mutations

CC in the P13K gene result in decreased glucose disappearance rates,

CC consequently, mutations in P13K genes are associated with glucose

CC resistance or (impaired glucose tolerance), non-insulin dependent

CC chaetes mellitus (NIDDM), cardiovascular disease, obesity and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Regulatory p85-alpha subunit; human; phosphatidylinositol 3-kinase; P13K; growth factor plasma membrane receptor; insulin receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           actin reorganization; insulin; glucose disappearance rate; glucose sensitivity; glucose resistance; glucose tolerance; non-insulin dependent diabetes mellitus; cardiovascular disease; obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    growth factor plasma membrane receptor; insulin receptor; tyrosine kinase activity; vesicle trafficking; protein sorting; pinocytic activity; cytoskeletal rearrangement; membrane ruffling;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ10319;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAZ10319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a PCR primer used for PCR amplification to detect the regulatory p85-alpha subunit of human phosphatidylinositol 3-kinase (P13K) amino acid substitution mutation at codon 326. P13K bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           be associated with impaired

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                      The present sequence is a DNA primer used for PCR amplification to detect the regulatory p85-alpha subunit of phosphatidylinosicol 3 kinase (P13K) amino acid substitution at codon 326, preferably Met326Ile, by SSCP gel analysis. A nucleic acid sequence encoding a regulatory subunit of F13K, and comprising at least 1 mutated nucleotide, can be used as a diagnostic tool, marker or probe. The presence of a mutation in a gene encoding a regulatory subunit of F13K can be detected by analysing a biological sample for the above nucleic acid sequence, useful to determine predisposition to impaired glucose tolerance (particularly when related to reduced glucose disappearance constant), or decreased glucose efficiency or insulin sensitivity (all of which may develop into non-insulin dependent diabetes, cardiovascular disease, obesity or
                                                                                                                                                                                                                                                                                                                                             Mutant phosphatidyl:inositol 3 kinase regulatory subunit DNA - useful to detect predisposition to impaired glucose tolerance and reduced insulin sensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

```
CC subject's genomic DNA with a restriction enzyme to produce DNA fragments C and treating the fragments to obtain single-stranded DNA molecules or soluting the subject's polyA+ mRNA; contacting the single-stranded DNA CC molecules or polyA+ mRNA under hybridising conditions with a labelled Synthetic DNA molecule, optionally bound to a solid support, comprising CC 12-20 nucleotides, where the synthetic DNA molecule is 5'-B-Q-D-3' in the CC case of single-stranded DNA or is complementary to 5'-B-Q-D-3' in the CC case of polyA+ mRNA, B = 0-9 nucleotides having a sequence complementary to 5'-B-Q-D-3' in the CC activated ras gene 3' of the mutated codon, provided that B and D contain a total of at least 9 nucleotides, and 0 is complementary to the mutated codon; treating the resulting hybridised molecules under conditions of permitting only fully complementary molecules to remain hybridised; and detecting the presence of the labelled synthetic DNA molecule in the probe used for detecting the activated N-ras gene when the mutated codon is at position 13 and has a single base substitution in the first or certain be used for the data oction at the codes and mucleotide position so that it encodes an amino acid other than CC labelled for the diagnosis of acute myeloid leukaemia and other the cumours. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-JUL-1985;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC criteria. Also claimed are methods for gene-silencing, developing an CC. siRNA algorithm for selecting siRNA, selecting an siRNA with improved cf functionality, selecting hyperfunctional siRNA, an siRNA molecule coffective at silencing Bcl-2, and a kit for gene silencing comprising the CC siRNA. The siRNA molecule comprises a sequence substantially similar to a CC sequence consisting of GGGAGNAGUGGAGUA, GARAGUACGUU; GGAGACACCGGAGAGUA; ACAUGAGUAGUAGUAGUA, GARAGUACGUUU; CC CAUGCGCCUCUGUUUGA, UGCGGCCUCUGUUUGAAGUU, GAGAUAGUAGUAGUACA; CC CAUGCGGCCUCUGUUUGA, UGCGGCCUCUGUUUGAUUU; GAGAUAGUAGUAGUACA; CC CAUGCGGCCUCUGUUUGA, UGCGGCCUCUGUUUGAUUU; The siRNA molecule CC comprises a sense strand and an anti-sense strand. The siRNA molecule CC pairs. The kit comprises at least two siRNA, comprising a first optimised CC pairs. The kit comprises at least two siRNA, comprising a first optimised CC siRNA and a second optimised siRNA. The method is useful in selecting CC used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
```

The sequence is that of a probe based on a unique nucleic acid sequence in the Chlamydia trachomatis major outer membrane protein (MOMP) gene which is present in all 15 serotypes of C. trachomatis. It corresponds to nucleotides 747-766 of the MOMP gene. It may be used for detecting and/or amplifying the MOMP gene of C. trachomatis, and can detect all 15 serotypes of C. trachomatis. Since the MOMP gene is unique for C. serotypes of C. trachomatis, Since the MOMP gene is unique for C. trachomatis, there will be no cross-hybridisation to nucleic acid from trachomatis, there will be no cross-hybridisation to nucleic acid from

8

outer membrane protein gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 2047
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC further comprise sense and antisense regions, or alternatively are assembled from a sense oligonuclectide and an antisense oligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA, double-cc stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs (can be unmodified or chemically modified, can contain (can be unmodified or chemically synthesised, expressed from a cc deoxyribonuclectides, and can be chemically synthesised, expressed from a cc complexes of siRNA; and vectors that express siNA. The siNAs are used to complexes of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used to complexe of siRNA; and vectors that express siNA. The siNAs are used for creating leukaemia and solid tumours, restenosis, polycystic kidney cc conditions. They may be used for treating leukaemia and solid tumours, restenosis, polycystic kidney cd disease, bronchiolitis, glomerulonephritis and stroke. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification cand validation, genetic engineering, pharmacogenomics, studying gene currents sequence represents the lower strand of a human pDGFr transcript for targeted double-stranded siNA, which is identical to the pDGFr transcript
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
